

CelVideo™

Wireless Video Surveillance System

- Centralized video monitoring
- Multiple cameras per unit
- Local high resolution video storage
 - Up to 7 days
 - 4 FIPS at 30fps
- Simultaneous monitoring stream
- Dual video encoder
- Compact unit
- Environmental enclosure
- Battery backup
 - 30 minutes
- Local high resolution video storage
 - Up to 7 days
 - 4 FIPS at 30fps
- Up to four Radios
 - 4.9 GHz
 - 5.1 to 5.8 GHz
 - 5.9 GHz

CelVideo is the ideal solution for wireless video surveillance for downtown areas, ports, harbors, railways, roads, borders and private areas. Each CelVideo enclosure supports two high quality cameras and has local storage (400 GB) to archive the video stream. This high quality video can be used as evidence and allows face recognition and plate reading at a distance.

The cameras have day and night capability and optionally infra-red illuminators can be added.

Each CelVideo enclosure can connect as a wireless client and transmit video streams from both cameras to a central

location where it can be monitored and stored for periods of 30 days. Sophisticated monitoring software and control center hardware is provided.

CelVideo uses Wi4Net's FlexiRadio family and has multiple wireless capabilities and besides being a wireless client, it can be additionally configured as an Access Point and as a Back Haul radio. This allows overlying a mobile wireless network for cars, helicopters or portable devices.

CelVideo a complete solution for public safety.
